

Date : Ex :	Create Dashboard using Tableau
----------------	--------------------------------

AIM

To develop an interactive Instagram Analytics Dashboard using Tableau by analyzing Instagram post data through KPI cards, charts, tables, and interactive filters, in order to understand follower count, engagement rate, content-category performance, media-type performance, and top-performing posts.

ALGORITHM

1. Open Tableau Desktop.
2. Connect Tableau to the Instagram Analytics Excel dataset.
3. Verify the available fields and data types.
4. Create a worksheet for displaying the Total Followers using a KPI-style text view.
5. Create a worksheet for displaying the Total Engagement Rate.
6. Create a Line Chart to analyze engagement rate by post date.
7. Create a Bar/Column Chart to compare engagement rate across content categories.
8. Create a Pie Chart to visualize engagement according to media type.
9. Create a Table containing Post ID and Engagement Rate.
10. Apply a Top 10 filter to identify the posts with the highest engagement.
11. Create a Content Category filter for interactive analysis.
12. Create a Media Type filter for interactive analysis.
13. Create a new Tableau Dashboard.
14. Add all the created worksheets to the dashboard.
15. Arrange and resize the visualizations appropriately.
16. Add a suitable dashboard title.
17. Test the filters and verify that the dashboard responds interactively.
18. Analyze the final dashboard and derive useful insights.

PROCEDURE

Diagram 1: Total Followers KPI

Procedure

1. Create a new worksheet in Tableau.
2. Select the Follower Count field from the Data pane.
3. Drag Follower Count to the Text option in the Marks card.
4. Tableau calculates the aggregated follower count.
5. Format the displayed number to make it clearly visible.
6. Rename the worksheet as Total Followers.

Output

The Total Followers KPI displays:

Total_followers
257,395,435

Diagram 2: Total Engagement Rate KPI

Procedure

1. Create a new worksheet.
2. Select Engagement Rate from the Data pane.
3. Drag Engagement Rate to the Text option in the Marks card.
4. Tableau calculates the aggregated engagement rate.
5. Format the number for better visibility.
6. Rename the worksheet as Total Engagement Rate.

Output

The KPI displays the total aggregated engagement rate:

total engagement rate

1,059

Diagram 3: Engagement Rate by Post Date

Procedure

1. Create a new worksheet.
2. Drag Post Date to the Columns shelf.
3. Drag Engagement Rate to the Rows shelf.
4. Select Line Chart from Show Me if required.
5. Tableau generates a line showing engagement-rate variation.
6. Format the chart and provide a suitable title.
7. Rename the worksheet as Engagement Rate by Post Date.

Output

A line chart is generated showing the engagement rate trend according to the post date.

Engagement rate by post date

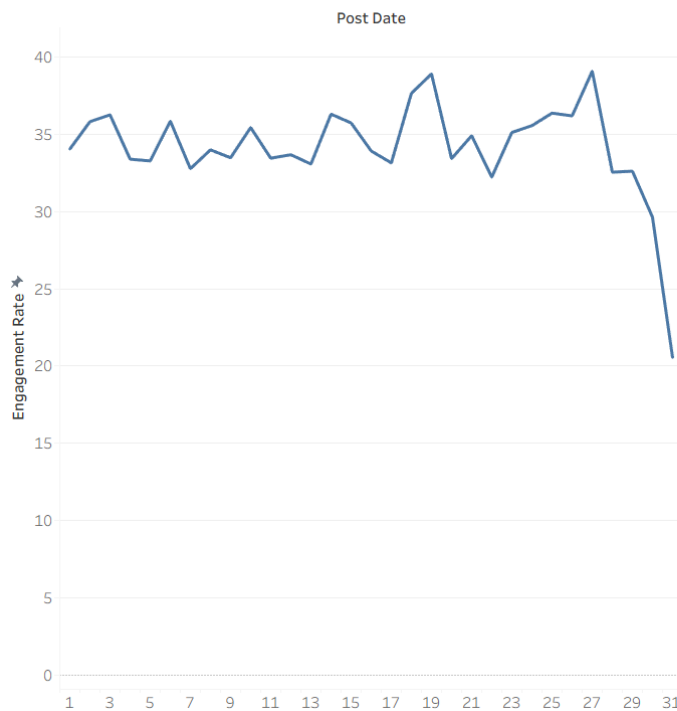

Diagram 4: Engagement Rate by Content Category

Procedure

1. Create a new worksheet.
2. Drag Content Category to the Columns shelf.
3. Drag Engagement Rate to the Rows shelf.
4. Select the Bar/Column Chart from Show Me.
5. Tableau generates a separate bar for each content category.
6. Add the title Engagement Rate by Content Category.
7. Format the chart for easy comparison.

Output

A bar chart is generated comparing engagement rates for categories such as:

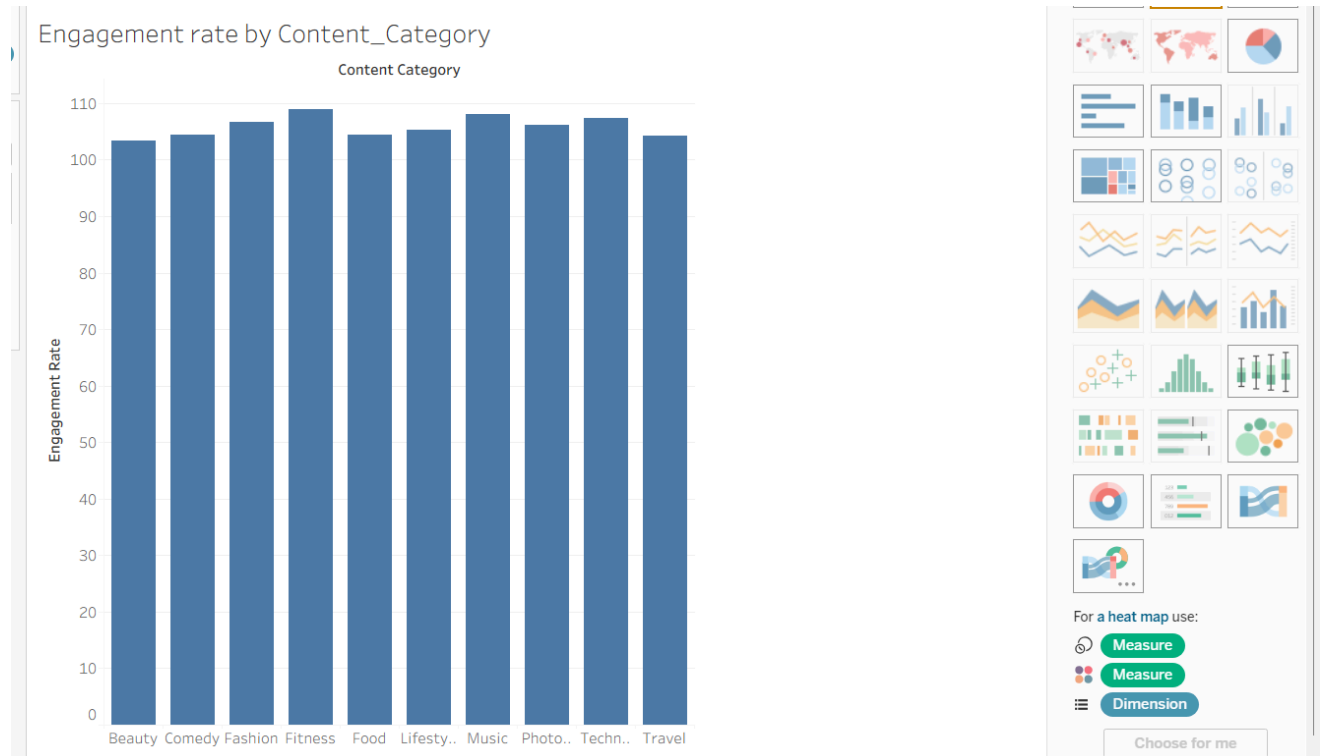

Diagram 5: Engagement by Media Type

Procedure

1. Create a new worksheet.
2. Select Pie Chart from Show Me.
3. Drag Media Type to Color in the Marks card.
4. Drag Engagement Rate to Angle.
5. Tableau divides the pie into sections according to media type.
6. Add the title Engagement by Media Type.
7. Format the visualization appropriately.

Output

A pie chart is generated showing the engagement distribution among different media types such as carousel, image, and reel.

Engagmenet by media type

Diagram 6: Top 10 Posts by Engagement

Procedure

1. Create a new worksheet.
2. Drag Post Id to the Rows shelf.
3. Drag Engagement Rate to the Text option in the Marks card.
4. Drag Post Id to the Filters shelf.
5. Open Edit Filter.
6. Select the Top tab.
7. Select By Field.
8. Set the filter to:

Top 10 by SUM(Engagement Rate)

9. Click OK.
10. Sort the resulting values in descending order.
11. Rename the worksheet as Top 10 Posts by Engagement.

Output

A table displaying the 10 highest-performing posts according to engagement rate is generated.

Top 10 engagement rate by post id

Post Id	
IG0005227	0.27100
IG0007780	0.24140
IG0007979	0.24030
IG0009304	0.25440
IG0017615	0.26580
IG0017637	0.25310
IG0017987	0.25270
IG0019641	0.24080
IG0025791	0.24760
IG0028356	0.24210

Diagram 7: Content Category Filter

Procedure

1. Add Content Category to the Filters shelf.
2. Select All categories.
3. Click OK.
4. Select Show Filter.
5. The content categories are displayed as an interactive filter.
6. Select any category to analyze that category separately.

Output

An interactive Content Category filter is created.

FINAL DASHBOARD

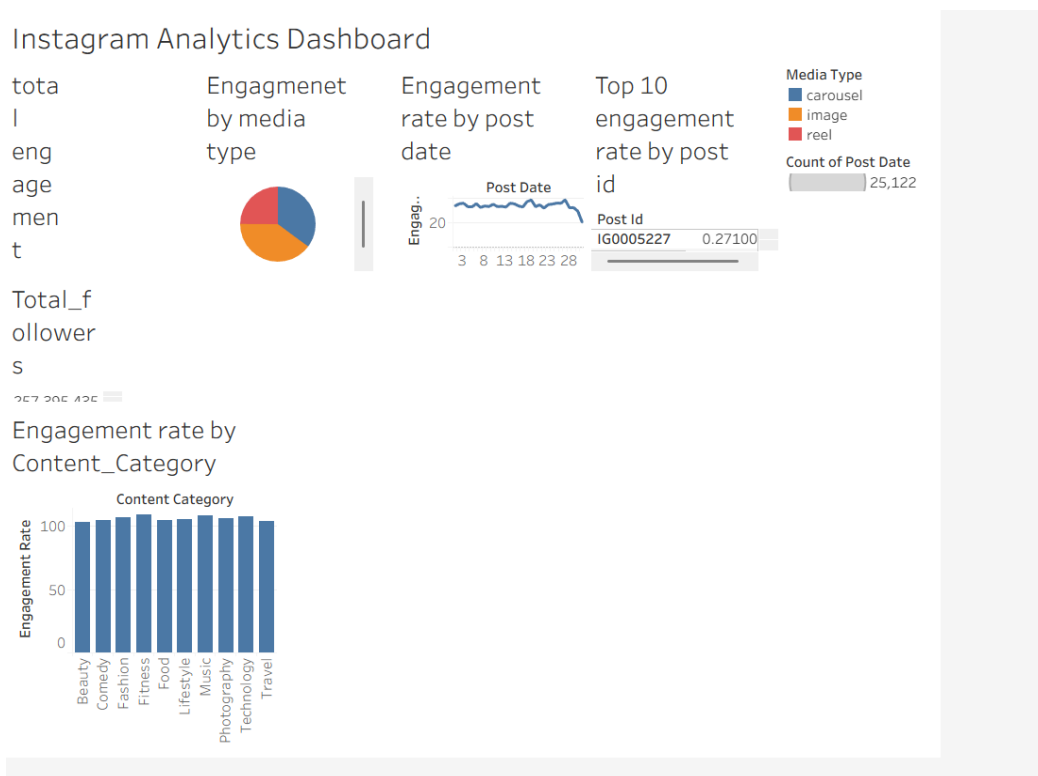

Procedure

1. Select Dashboard → New Dashboard.
2. Tableau displays the available worksheets on the left side.
3. Drag the required worksheets onto the dashboard.
4. Add the following visualizations:
 - Total Followers

- Total Engagement Rate
 - Engagement Rate by Post Date
 - Engagement Rate by Content Category
 - Engagement by Media Type
 - Top 10 Posts by Engagement
5. Arrange the KPI cards at the top.
 6. Place the line chart and comparison charts below the KPI cards.
 7. Place the Top 10 table at the bottom.
 8. Add Content Category and Media Type filters.
 9. Add the title:

INSTAGRAM ANALYTICS DASHBOARD

10. Resize and align the visualizations.
11. Test the filters by selecting different categories and media types.
12. Verify that the dashboard updates according to the selected filters.

RESULT :

Thus, the Instagram Analytics Dashboard was successfully created using Tableau. The dashboard provides an interactive analysis of Instagram performance through
